## FAQ's about Home Health Care

### Understanding Your Services

#### What can I expect with home care?

The home health team will come to you to provide you with the services you need, while doing their best to not disrupt your home or lifestyle. To prepare, we ask that you:

- ▶ Take out all medications prior to the first visit for care team evaluation
- ▶ Be vocal about your needs
- ▶ Follow your care plan

#### Will they help me with cooking and cleaning?

▶ We are happy to provide assistance with cooking, cleaning or other similar activities of daily living. Please keep in mind that while there are exceptions, most insurances do not provide coverage for these services.

#### Can I have a family member take care of me?

▶ While family members and caregivers can be instrumental in your recovery process, **home health agencies provide skilled services, such as wound care and therapy**, that your loved ones won't be able to provide for you. That said, each can assist with your recovery process.

#### How long will I receive home health visits?

▶ The amount of time you spend receiving home health care will depend on your unique needs, condition, progress and individual care plan.

#### What happens next?

▶ You will receive care for as long as your doctor and home health care team determine is necessary. After that, your home health team will recommend a plan for moving forward including visits with your primary care physician and outpatient therapy if needed.
